

# DENTAL IMPRINT IDENTIFICATION

**Creates dental ID.** Documents unique tooth characteristics, tooth position and interarch relationship, creating an important adjunct for accurate identification.

**Provides DNA.** Sufficient epithelial cells from the saliva remain on the dried Toothprints wafer from which a DNA analysis can be performed.

**Captures saliva for scent-dog tracking.** Scent from saliva is protected in zip-lock bag for patients' safekeeping and easy access.

Your child's next dental examination will include

complimentary Toothprints®.
